Art Unit: 3738

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 44-63 and 79-83, drawn to a prosthetic limb socket, classified in class 623, subclass 36.
- II. Claims 43, 64, and 67-78, drawn to a valve assembly, classified in class 251, subclass 365.
- III. Claims 65 and 66, drawn to a method of donning a prosthesis, classified in class 623, subclass 36.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not even require the valve itself, as seen from instant claim 83. The subcombination has separate utility with various types of devices requiring valves, such as a pulsating, inflatable therapeutic apparatus.

Inventions (I or II) and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as, in the case of the valve assembly (Invention II), a process of using the

therapeutic apparatus described above, and in the case of the prosthetic limb socket (Invention II) or the valve assembly (Invention I), the process of donning the sleeve and the socket first and then creating a partial vacuum within the socket (in the conventional manner) so as to retain the socket on the residual limb.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and/or divergent required searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dave Willse, whose telephone number is (703) 308-2903. The supervisor, Corrine McDermott, can be reached at (703) 308-2111. The receptionist's phone number is (703) 308-0858, and the main FAX numbers are (703) 305-3591, 3590.
